## DETAILED ACTION

### *Election/Restrictions*

1. This application contains claims directed to the following patentably distinct species:
  - Group I (Claims 1-21), is directed toward an encoder/decoder method that uses modifiable channel-specific quantization factors that are altered based on certain quality settings.
  - Group II (Claims 22-68), is directed toward an encoder/decoder method that quantizes audio data based specifically on the use of matrices.
2. The species are independent or distinct because wherein both groups are directed towards audio encoding/decoding; the processes involved in performing quantization are both clearly distinct methods.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an

allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
